Introduction

The Role of the BIM Manager

Agenda

18:00 – Introduction + BIM update by Mike Turpin, *Innovating Futures*

18:10 – What is a BIM Manager; Client View by Allister Lewis, *HCC*

18:35 – What is a BIM Manager; Contractor View with David Cotterill, *Senior Design Manager, & Lee Ramsey, Head of Design Management and Building Information Modelling Morgan Sindall*

Construction & Infrastructure

19:00 - Questions

BIM Level 2 – An update

- Current suite of BIM standards currently being “updated” for consistency and due to be released mid autumn
- Minor changes only as BIM Level 2 is set
- Work now beginning on Digital Built Britain initiative

BIM Show Live 2018

BIM SHOW LIVE – SPEAKERS

Wednesday 28 February & Thursday 1 March 2018
Boiler Shop, Newcastle upon Tyne, UK

Call for papers is now open!

It's official, we're now looking for speakers, but be quick as entries close on Thursday 16 November.

We're looking for the brightest minds and the best ideas, those who share our appetite for all things digital, and believe in the power of technology.

Papers are now being accepted for the four content streams; Next Generation, Data, Strategy and Stories.

Autodesk AEC Licence Changes

- Change from “Suites” to “Collections in 2016
- Move from perpetual licences to subscription only
- AEC Collections now also contain:
 - Revit Live
 - Fabrication CADmep
 - Robot Structural Analysis Pro
 - Advance Steel
 - Dynamo Studio
 - Structural Bridge Design

(On top of the previous 21 features)

 Revit Built for BIM. Intelligent model-based software. Plan, design, construct and manage buildings and infrastructure projects.	 AutoCAD Software for 2D and 3D CAD. Work with TrustedDWG technology.
 Civil 3D Supporting BIM (Building Information Modelling) processes for enhanced Civil engineering design and construction documentation.	 Navisworks Manage Project review software empowering architecture, engineering and construction professionals to review integrated models and data - driving better project outcomes.

WHAT IS A BIM MANAGER?

Multidisciplinary team and client view

Allister Lewis – BIM & CAD Strategy Manager Hampshire County Council
(HCC)

Allister Lewis - Architect & BIM Manager

Architect

- Worked in private and public sectors over last 15 years on a range of projects
 - Architect with experience of public buildings – schools, community centres, children’s centres, libraries and housing
-

RICS Chartered BIM Manager

- BIM Manager - Passionate about BIM, collaborative working and high performance buildings
- Studying for an **MSc** in Building Information Modelling and Management

BIM MANAGER ISSUES AT HCC

- There are drivers to **improve efficiency** at HCC
- Confusion on what '**BIM**' is and what may change
- Ongoing consultant specific **Hardware** issues
- Out of date **Software** of different types utilised
- No **Standards** for how information is shared and issued
- Confusion of IT and **BIM / CAD** roles
- Uneven **Training** and support organised
- **Programme / timescales** unclear

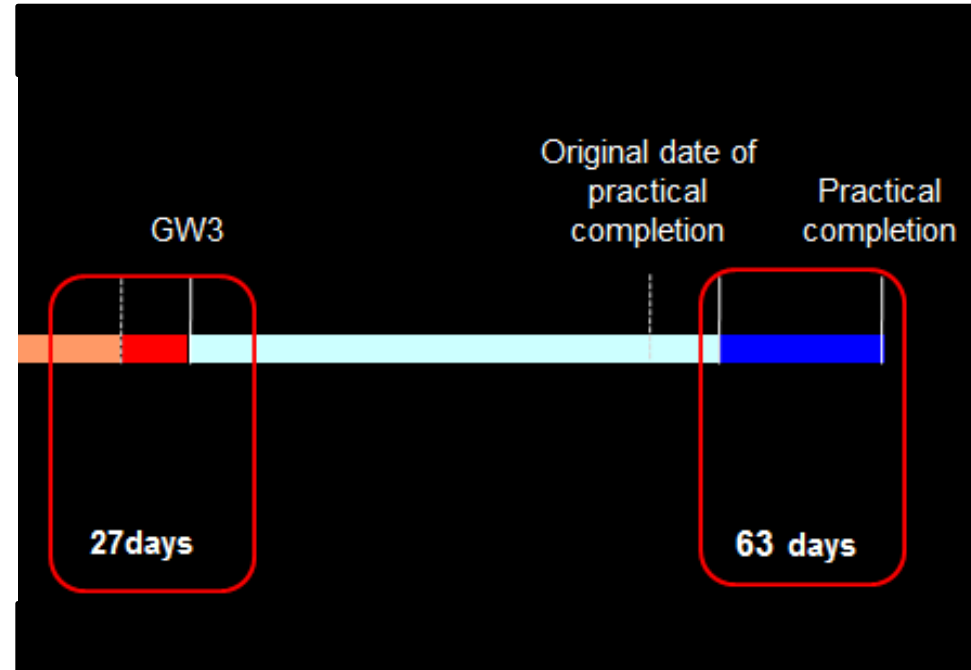

WIDER INDUSTRY CONTEXT

- Construction industry **productivity is low** and has not changed significantly over past 50 years.
- There is a Government drive to **improve** productivity.

What does this mean for HCC?

- It was identified that in D&I 2015 programme projects were **90 days** on average delayed.
- BIM has been identified as the **best way** to support greater productivity.
- Aim is to be as efficient as possible with the **correct tools**

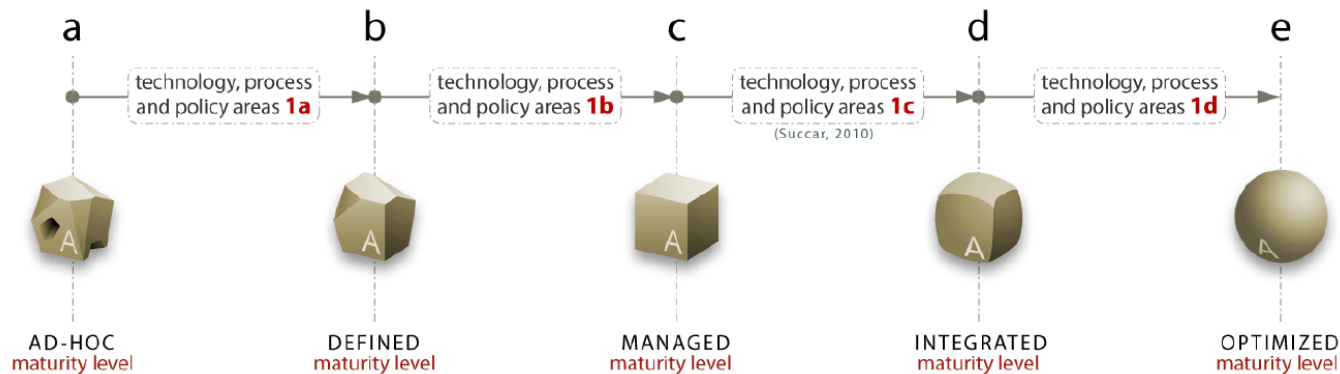

WHERE TO START?

BIM Maturity Matrix – from initial to optimised

- Developed by Bilal Succar
- Technology
- Process
- Policy

Provides a good place to start for BIM Managers to assess an organisations maturity

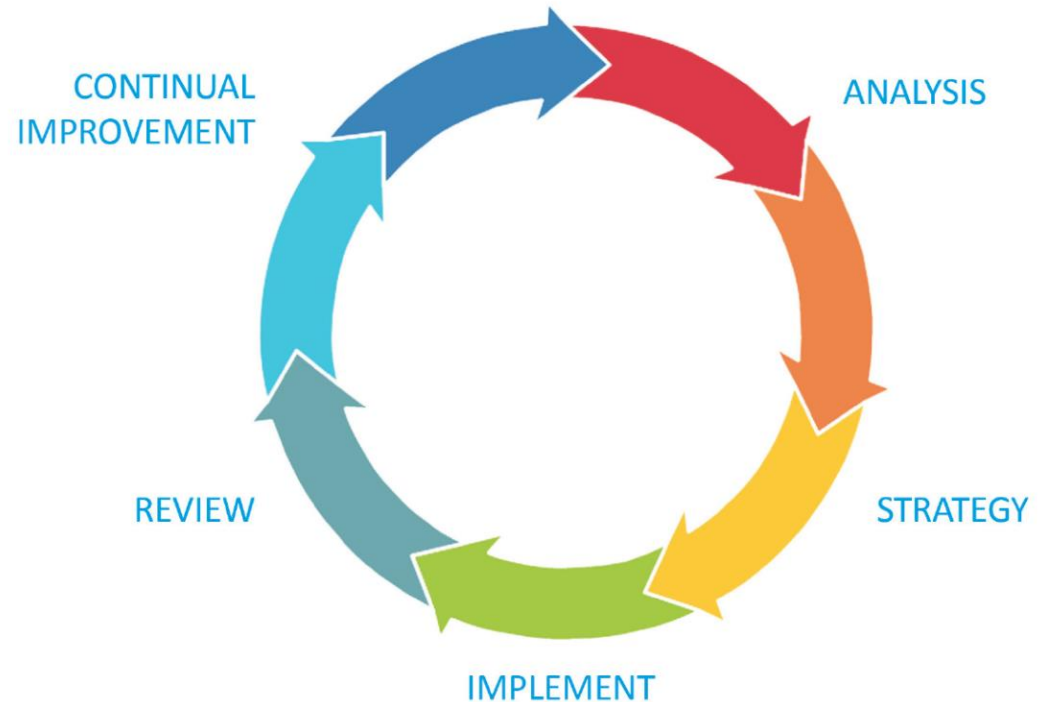

Key Maturity Areas at Capability Level 1	a INITIAL (Score 0)	b DEFINED (Max Score 10)	c MANAGED (Max Score 20)	d INTEGRATED (Max Score 30)	e OPTIMIZED (Max Score 40)
Resources: Physical and knowledge infrastructure	The work environment is either not recognised as a factor in staff satisfaction or may not be conducive to productivity. Knowledge is not recognised as an asset. BIM knowledge is typically shared informally between staff (through tips, techniques and lessons learned).	The work environment and workplace tools are identified as factors affecting motivation and productivity. Similarly, knowledge is recognised as an asset, shared knowledge is harvested, documented and thus transferred from tacit to explicit.	The work environment is controlled, modified and its criteria managed to enhance staff motivation, satisfaction and productivity. Also, documented knowledge is adequately stored.	Environmental factors are integrated into performance strategies. Knowledge is integrated into organisational systems; stored knowledge is made accessible and easily retrievable.	Physical workplace factors are reviewed constantly to insure staff satisfaction and an environment conducive to productivity. Similarly, knowledge structures responsible for acquisition, representation and dissemination are systematically reviewed and enhanced.
Activities & Workflows: Knowledge, skills, experience, roles and relevant dynamics	There is an absence of defined processes; roles are ambiguous and team structures/dynamics are inconsistent. Performance is unpredictable and productivity depends on individual heroics. A mentality of 'working' around the system flourishes.	BIM roles are informally defined and teams are formed accordingly. Each BIM project is planned independently. BIM competency is identified and targeted; BIM heroism fades as competency increases but productivity is still unpredictable.	Cooperation within organisations increases as tools for cross-project communication are made available. Flow of information steadies; BIM roles are visible and targets are achieved more consistently.	BIM roles and competency targets are embedded within the organisation. Traditional teams are replaced by BIM-oriented ones as new processes become part of organisation/project team's culture. Productivity is now consistent and predictable.	BIM competency targets are continuously upgraded to match technological advances and align with organisational objectives. Human resource practices are proactively reviewed to insure intellectual capital matches process needs.
Products & Services: Specification, differentiation and R&D	3D models/deliverables to BIM product suffer from too high, too low or inconsistent levels of detail.	A 'statement defining the object breakdown of the 3D model' is available.	Adoption of product/ service specifications similar to Model Progression Specifications, BIP5 'information levels' or similar.	Products and services are specified and differentiated according to Model Progression Specifications or similar.	BIM products and services are constantly evaluated; feedback loops promote continuous improvement.
Leadership & Management: Organisational, strategic, managerial and communicative attributes; innovation and renewal	Senior leaders/ managers have varied visions about BIM. BIM implementation (according to BIM Stage requirements) is conducted without a guiding strategy. At this maturity level, BIM is treated as a technology stream; innovation is not recognised as an independent value and business opportunities arising from BIM are not acknowledged.	Senior leaders/managers adopt a common vision about BIM. BIM implementation strategy lacks actionable details. BIM is treated as a process-changing technology stream. Product and process innovations are recognised; business opportunities arising from BIM are identified but not exploited.	The vision to implement BIM is communicated and understood by most staff. BIM implementation strategy is coupled with detailed action plans and a monitoring regime. BIM is acknowledged as a series of technology, process and policy changes which need to be managed without hampering innovation. Business opportunities arising from BIM are acknowledged and used in marketing efforts.	The vision is shared by staff across the organisation and/or project partners. BIM implementation, its requirements and process/product innovation are integrated into organisational, strategic, managerial and communicative channels. Business opportunities arising from BIM are part of team, organisation or project-team's competitive advantage and are used to attract and keep clients.	Stakeholders have internalised the BIM vision and are actively achieving it. BIM implementation strategy and its effects on organisational models are continuously revisited and realigned with other strategies. If alterations are needed, they are proactively implemented. Innovative product/ process solutions and business opportunities are sought-after and followed through relentlessly.

BIM MANAGER APPROACH

Aim: to **improve** the following areas to support staff to be as **efficient** as possible;

1. Use BIM = 'Better Information Management'
2. Identify **hardware** improvements
3. Identify **software** needs
4. Use, communicate and support use of **standards**
5. Confirm **BIM manager role** to teams
6. Develop, procure, deliver and support **training**
7. Work to a **programme**

1. BETTER INFORMATION MANAGEMENT

- BIM is a set of **technologies, processes and polices** enabling multiple stakeholders to **collaboratively** design, construct and operate an asset over its lifecycle.
- The aim is to increase **productivity, lower costs** and **understand assets**.
- Government has identified that BIM can support **20% saving** in overall costs, and previous HCC projects using Revit have shown a **16% reduction** in fees alone.

But...

- Overall HCC is at **BIM Level 0** ...

2. HARDWARE

Assessment required to improve:

- Virtual environment access
- PCs
- Laptops
- Mobile working to be supported

3. SOFTWARE

Current software

Vectorworks

AutoCAD

Revit

CATO

NBS Building

Photoshop Elements/CS

Photoshop Creative Suite

SketchUp pro7/8

Future software

AutoCAD

AUTODESK
REVIT

interoperable

AUTODESK AUTOCAD

Revit

CostX

NBS Create

VectorWorks
2008

4. STANDARDS

Start with implementation of BIM Level 1

- Opportunity to create **consistent approach** using new software
- Utilise BS 1192 methods
- E.g. BIM Protocol, BIM Execution Plan, Revit Protocol, etc.
- Then move to BIM Level 2 once Level 1 established

Name ^	Date modified

5. BIM/CAD SUPPORT ROLES

BIM & CAD Team

Here to support teams **work effectively**.

Allister Lewis

- BIM & CAD strategy, project support, software support, training
- Coordination role with IT Services

Team

- CAD Manager to support software queries and bugs

IT Services

- If something isn't working, contact IT!
- Procuring and installing hardware
- Procuring and installing software requests
- Managing issues with hard and software not working

6. TRAINING

Targeted CAD & BIM training to include;

- Knowledge transfer with **in house training**
- Targeted **off site** training as required
- Flexible **online** training option available [Global eTraining](#)
- Monthly **drop in sessions**
- **CAD Group** and **Champions** within teams

7. PROGRAMME

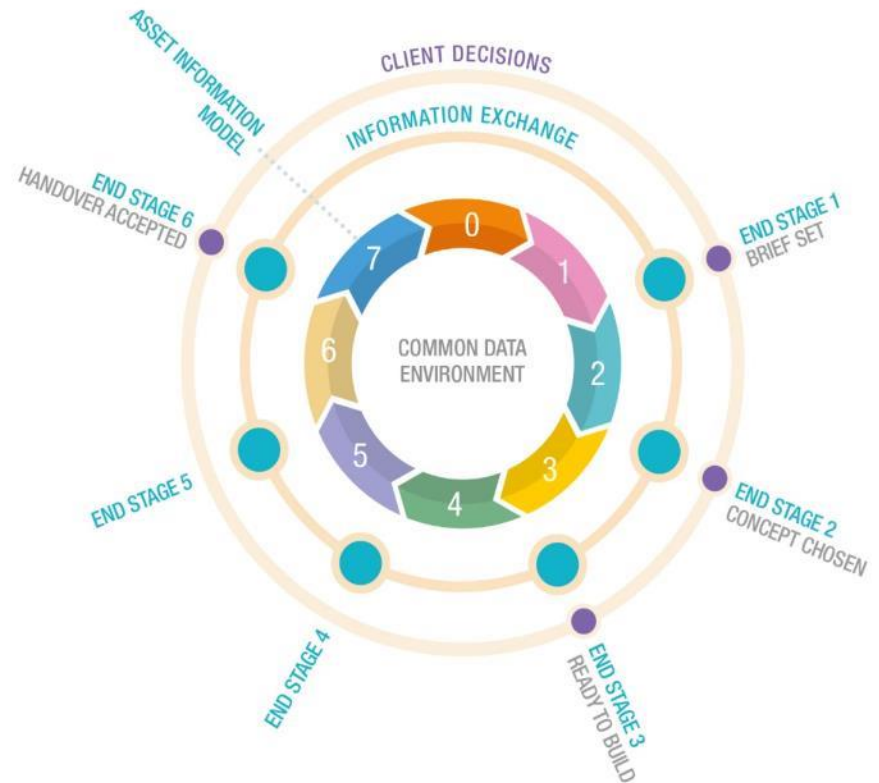

2017 – 2019

- BIM Level 1 implementation 2017
- Look to BIM Level 2 2018
- BIM Level 3 announced 2019

8. THE FUTURE

- Will the BIM Manager change to a role of an “**Information director**” who is an individual that will “*have the opportunity to become a **unique** entity who consults with architects, contractors, and facility managers*”?
- BIM Managers are “*valued for their empathetic subtlety*” when working with teams and that this is due to the requirement to work **proactively** with all people on a project to bring them together.
- How will the role be **formalised** and understood within the broader construction industry? A profession in itself?

BIM Management

Supporting clients – BIM Management

Bridging the gap

Client demand - Forecasting the growth

% BIM vs Non-BIM projects

Client demand - Forecasting the growth

Opportunities

We are currently delivering 13 projects with BIM Level 2 and a total of £518m of BIM projects over the next two years

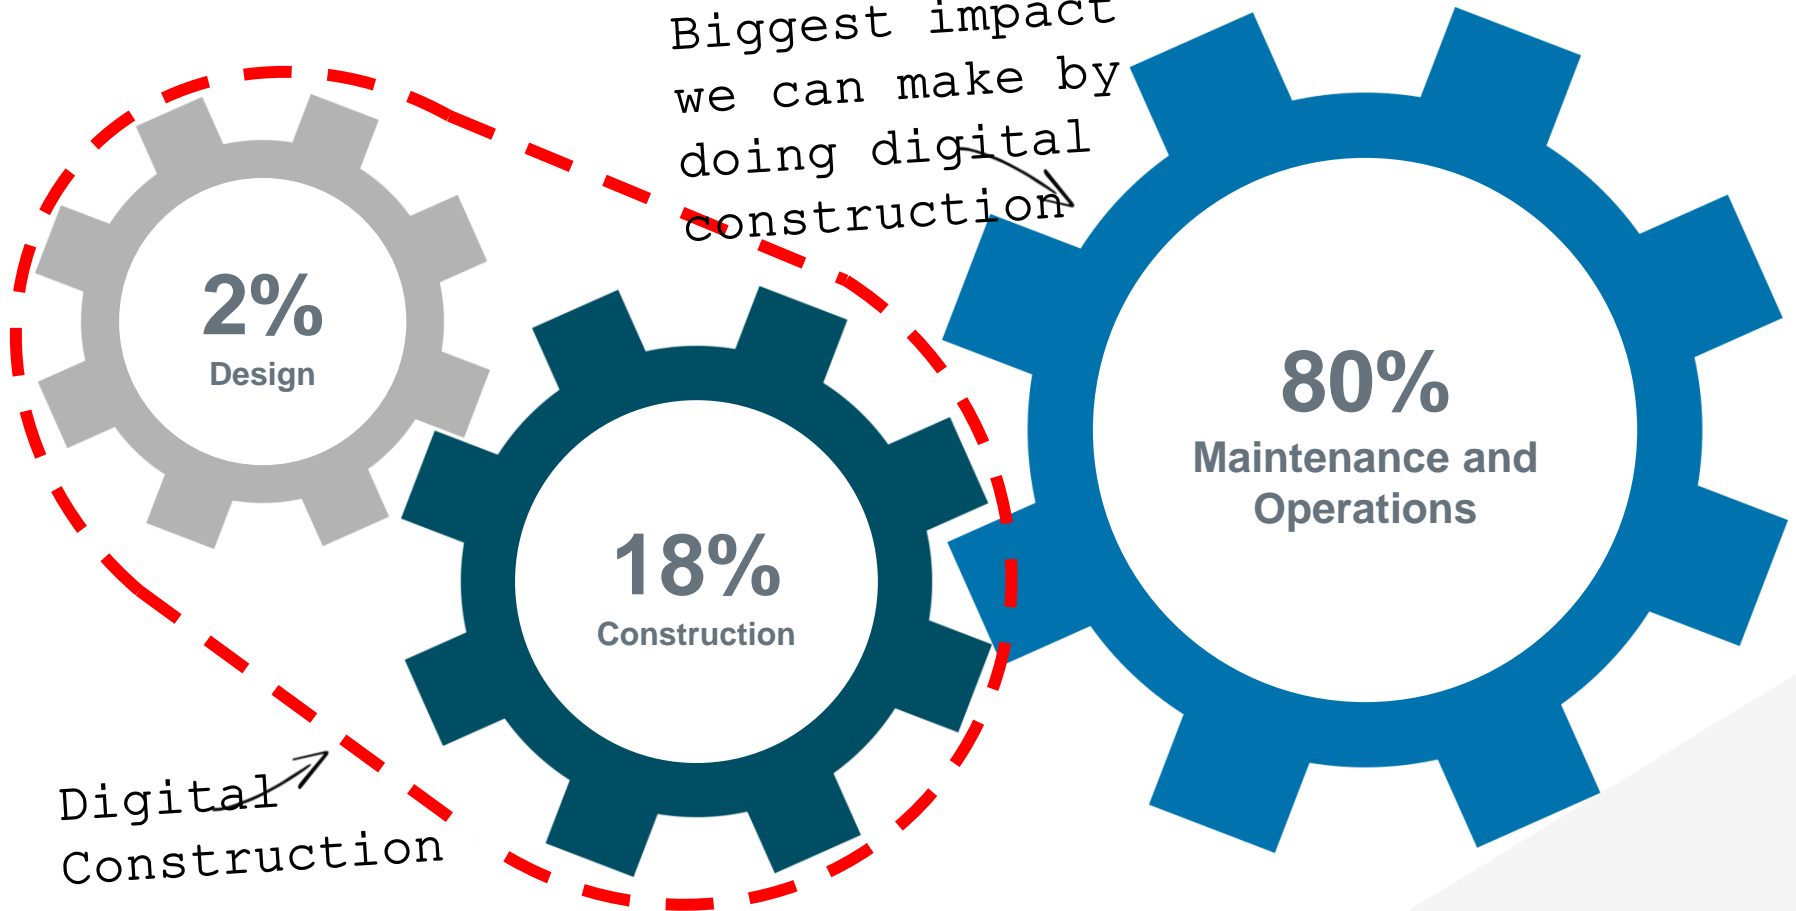

Where to start

Greatest Value

Typical life-cycle cost of a building

Biggest impact
we can make by
doing digital
construction

Built and Digital Asset Benefits

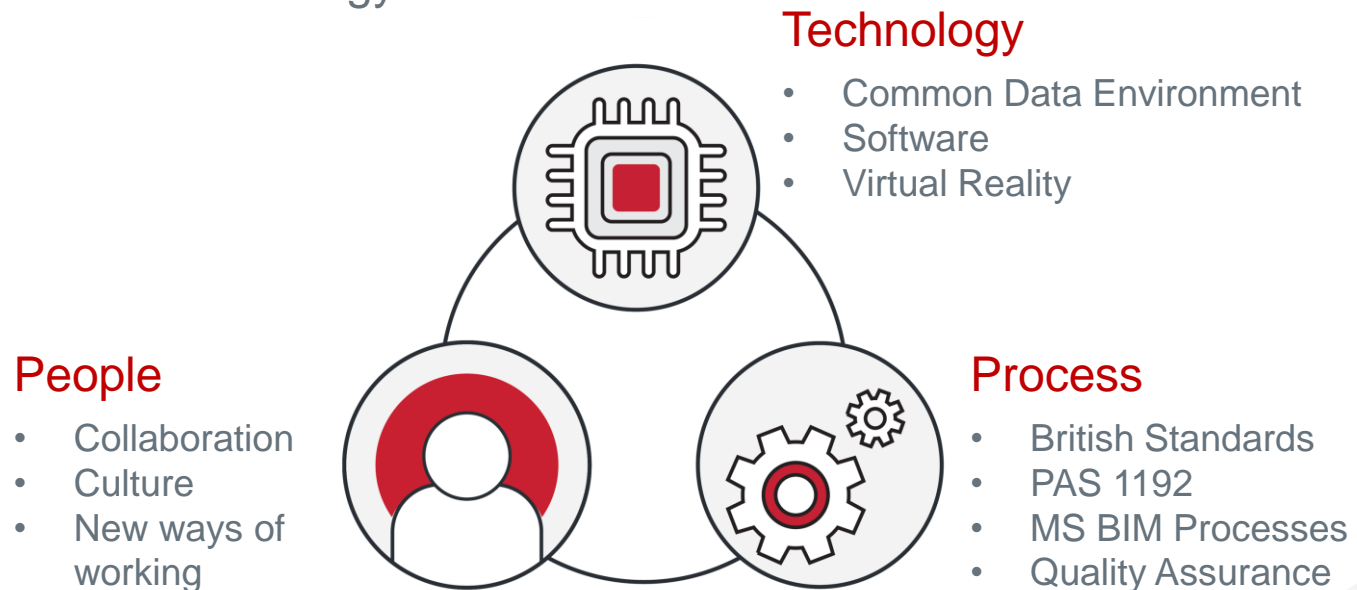

Utilising BIM to digitally design, build and operate

Digital Construction

The Basics

BIM is more than modelling, it's about people, process and technology

Roles & Authorities

Roles & Authorities

Who is the Information Manager – **Client Side**?

Traditional Role

- Technical Advisor

Scope of Work

- Sets BIM brief – OIR, AIR, EIR
- Checks model data for quality and consistency - Throughout
- Monitors progress
- BIM Management

Authorities

- Accept or reject information exchanges

← Highlights issues, not
problem solving

Roles & Authorities

Who is the Project Delivery Manager?

Traditional Role

- Design Manager

Scope of Work

- Facilitate delivery of information exchanges
- Confirm supplier's ability to deliver information requirements
- Update and maintain the MIDP and make available via the CDE platform. Responsible for management of the CDE environment
- BIM Management

Authorities

- Accept or reject
- Information exchanges

Roles & Authorities

Who are the Task Team Managers?

Traditional Role

- Consultant & Supply Chain Project Leads

Scope of Work

- Enforce documentation standards for their Task Team information
- Issue approved information to the shared functional section
- BIM Management

Authorities

- Issue approved information to the shared area with the appropriate status code (status codes S1 and S2 only)

Roles & Authorities

Who is the Lead Designer?

Traditional Role

- Lead Designer

Scope of Work

- Coordination of all design information
- Manage information development and approvals at gateways
- Advise on design deliverables from other parties and overall lead for spatial coordination
- BIM Management

Authorities

- Confirm status & accepts information for use within the shared and published functional sections
- Propose design changes to resolve clashes

← Lead Designer
responsibility to
coordinate design and
resolve clashes

Roles & Authorities

Who is the Information Manager – **Contractor side**?

Traditional Role

- N/A New Role
- ← Not the Lead Designer

Scope of Work

- Validates the Project Information Model to ensure deliverables follow the agreed protocols, that the data is to the defined levels in the BEP and is accurate
- Enforce the project BIM standards and ensure delivery of the requirements of the EIR
- BIM Management

Authorities

- Accept or reject information exchanges
- No design responsibility or right to issue instruction

← Lead Designer
responsibility to
coordinate design and
resolve clashes

Roles & Authorities

Contractors Information Manager - Scope of Work

The primary scope of the Information Manager is to:

- Assess the models compliance with the EIRs & BEP
- Provide the PDM with Quality Assurance Reports (QARs)
- Highlights within the QARs deficiencies in the design
- Check that the lead designer is federating the models, clash detecting and assigning responsibilities to resolve clashes

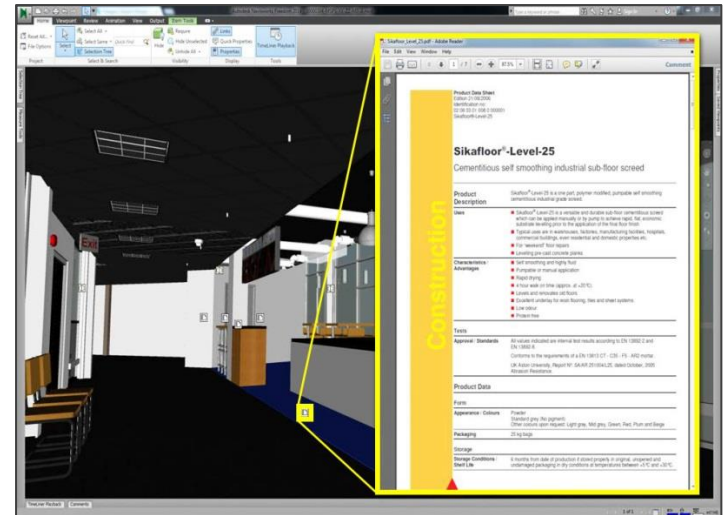

Impact	Incorrect quantities, incorrect drawings and setting out	
13 Issue	216 grouped clashes detected when clashing Arch and MEP models at 200mm tolerance	
Proposal	Arch & MEP Eng to resolve as per report "30000686-MSPS-00-ZZ-CR-X-0002-ARCvMEP.html"	
EIR/BEP Non Compliance		
E1 Issue	Elements in the model are mainly "Generic" or "Concept", LOD 1-2 with no LOI	
E2 Issue	No object has been correctly classified (UniFormat 2015 according to the EIR)	
E3 Issue	Cobie parameters have been created in the models, but no COBie data has been populated.	
E4 Issue	Area & Volume computations not set as outlined in EIR (Section 2.10.4)	
E5 Issue	Revit and AutoCAD links have not been removed prior to sharing	

Roles & Authorities

Contractors Information Manager - Scope of Work

The primary scope of the Information Manager is to:

- Check the completion of information and detail within the model aligns with NBS Toolkit deliverables for the LOI & LOD stated within the BEP
- Federates models to extract the COBie data during the design development
- Undertakes checks and provides comments as models pass through the CDE

Roles & Authorities

Information Manager Benefits

The main benefits of employing a Contractors Information Manager are:

- Ensures an achievable BIM scope avoiding unnecessary additional cost
- Reduces risk through managing delivery of contractual BIM obligations for both geometry and data
- Improves quality of models and data through model reviews and reports
- Reduces site issues through improving coordination and collaboration
- Ensures good data for customers to populate their systems post handover

Obligation

Built and Digital Asset

If we required to deliver a model at the end of a project we must ensure the digital asset has been verified

Both should be evaluated, checked and 'snagged'

Built Asset

Digital Asset

Client may appoint an Information Manager to review and approve models, data and O&M Manuals at

**Example of
Challenges**

The Brief

Challenges - COBie

Example of a Client Requesting High Amount of COBie Data

!! Component, Systems & Assembly Data !!

Data Drop 5 – Construction

Information Deliverables:

COBie Tabs	Architect	Structural Engineer	MEP	BIM Coordinator	Contractor
Contact				✓	✓

Picklists?					

The Brief

Challenges - Model Production And Delivery Table

Example of a Client Requesting High Level of Detail

4.4 The model production and delivery table is as follows (note: there is no requirement for BIM production at information exchange 1b):

[amend the numerical references in red to reflect additional BIMs to be provided]

		1	2	3	4	5	6	7	
		1a	2a	2b	3	4	5	6	7
		Education Funding Agency/ TA				Contractor			
Digital 3D object oriented models to be created for:	Collectively or singularly these models are to provide a visual representation of:	LOD	LOD	LOD	LOD	LOD	LOD	LOD	LOD
Architectural design	1 Space arrangement and internal layouts				3	4	5	6	7
Structural design	2 The building(s) and the site in context				3	4	5	6	7
Civil engineering design	3 The external and internal structure				3	4	5	6	7
Mechanical, electrical and plumbing services design	4 Building and plant services				3	4	5	6	7
Fixtures, fittings and equipment	5				3	4	5	6	7
	within				2	3	4	5	6
	and replacement				2	3	4	5	6
	and temporary works				3	4	5	6	7
10	Lighting arrangement and levels				3	4	5	6	7

Using the native models or interfacing software, the data within the models should support/enable:

- A The validation of BREEM compliance/attainment
- B The calculation of utility services demand and supply
- C Acoustic analysis
- D Thermal analysis
- E The production of room data sheets
- F Lighting analysis
- G Whole life analysis

!! LOD number is linked to RIBA Stage !! + LOD 7?

Models

Challenges – Coordinates

Example Project

This is a Morgan Sindall BIM project at RIBA Stage 4 which had not employed an Information Manager

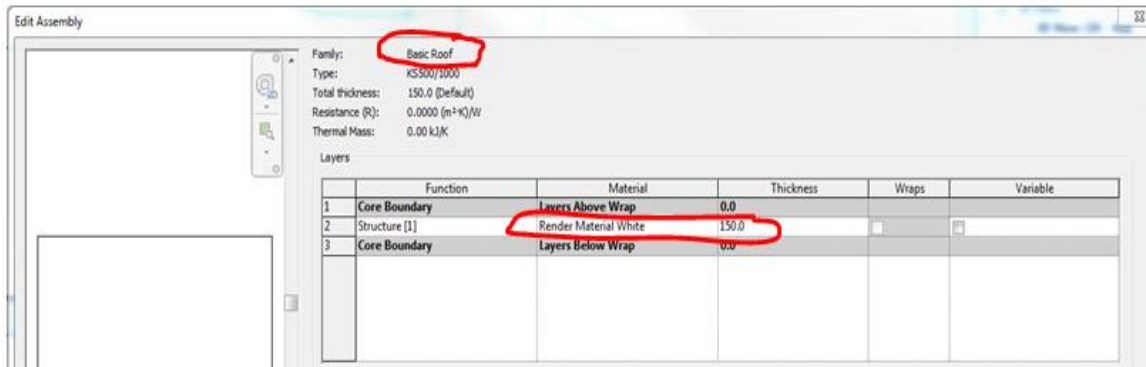

Models

Challenges – LOD and COBie

Example

This is a Morgan Sindall BIM project at RIBA Stage 4 which had not employed an Information Manager

In this example the elements did not meeting the required Level of Detail for the project at Stage 3 e.g. the roof was modelled as 150mm thick render and no COBie data had been provided despite it being a requirement at this design stage

Models

Challenges – Collaboration and Coordination

Example

This is a Morgan Sindall BIM project at RIBA Stage 4 which had not employed an Information Manager

In this example the roof had been modelled by the architect to falls but the engineers had designed the steel flat

Summary

Why a Contractors Information Manager

**BIM without an Contractors
Information Manager
= Site without a Project Manager**
